Research in nursing

Bizhanova AD, Abdan AK, Buribekova Z.M.
Shymkent DHSK "Shymkent higher medical college“ SME on the right of EM .

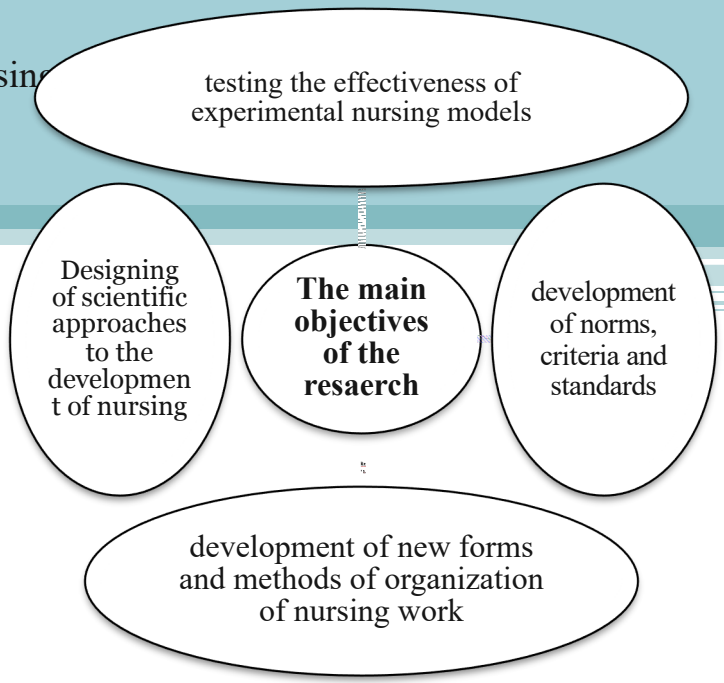
The current state of medical science and health care requires the use of new ways and technologies of collecting, analyzing, unifying and interpreting scientific information to address the general problems of the organization of medical care with nurses, transforming research results into clear, concrete recommendations.

Stages of nursing research:

prove of research topic; → research program and methods; → results of the research.

Research Purpose:

- substantiated new educated in practice application;
- improving the quality of nursing practice;
- improvement of existing activities.



In conclusion, a well-founded approach in clinical practice can be implemented only if nurses are constantly proficient and independently trained in modern technologies for searching, analyzing and accumulating medical information.

The main electronic sources of factual information on nursing:
