

### INTRODUCTION AND OBJECTIVES

Attitude of knowledge and practice of nurses to the prevention of CABIS in pediatric patients in oncology...

1. Assessment of knowledge and attitudes of nurses of NRCMC of UMC to problems during the care of patients with a central vascular catheter in pediatric patients with cancer
2. Provide advice on updated guidelines reducing the incidence of catheter-associated bloodstream infections, which are used in world practice, with further inclusion in the curriculum of professional training for nurses of the NRCMC of UMC.

### METHODS

A quantitative study among nurses of oncology and pediatric intensive care units (n = 73) during August and September 2020, working at the NRCMC of UMC in Nur-Sultan, Kazakhstan.

### RESULTS

percent coverage for survey made up (100%).

Caring for the CVC in each department depends on the profile of the department and the underlying disease

### CONCLUSIONS AND VALUES

The results of this study showed that educational interventions are very important and must be implemented to close gaps in nursing knowledge and practice, and to ensure that nurses use evidence-based preventive interventions in their practice. To do this, it is necessary to prepare a unified manual for CABIS in the NSCMD KF "UMC".
